## **Fibre in SA is set to change with our new QSFP28 100G compatible transceiver module range**

Do you have a bandwidth intense networking environment that you need to take to the next level? Well the good news is that with the recent release of our Netshield QSFP 100G range of compatible transceiver modules, you can – and you don't have to throw out the family jewels (your network) in the process.

With our Netshield QSFP 100G range you can literally add these to any environment, as they are 100% hardware agnostic and 30% cheaper than available counterparts. Furthermore, installing these modules means you don't have to rip or replace any part of your existing network – which translates to even further savings.

They are perfect for providers of high speed fibre in South Africa, and now, with our range of SFPs that cater from 1G, 10G, 40G and now 100G, a service provider can more easily allocate bandwidth in an area, per block, by simply clustering the allocations as per the bandwidth requirement of the users, without a break in quality.

- The Netshield 100G Quad Small Form-Factor Pluggable (QSFP28) compatibles allow a customer to leverage a variety of high-density and low-power 100 Gigabit Ethernet connectivity options.
- Based on the industry standard QSFP28 design, these devices are a compact, hot-pluggable transceiver used in particular for data communications applications.
- They are able to interface with the hardware of almost all known vendor based switches and servers, splicing to a fibre optic cable or active or passive electrical copper connection.

But don't just take our word for it. All our SFP compatibles are quality tested, hot-swappable and interoperable with other IEEE-compliant 100G interfaces. We have tested them and they show superior performance, quality, and reliability and are high-speed electrical interface compliant.

If you need these post haste and don't want to have to wait for lengthy processing cycles, we have some great news for you. As a Netshield resellers, you are able to buy your SFPs online from the Netshield Store! By taking the leap to digital distribution we are offering faster delivery times, quicker access to products as well as the ability to take advantage of and register for wholesale pricing.

Why not try them for yourself?
